SUMMARY

Security+ certified cybersecurity professional with about two and a half years of solo IT administration experience, pursuing CompTIA CySA+ (in progress, expected October 2026). Built a Splunk, n8n, and GPT-4 alert triage pipeline that cut time to detect from 45 to 8 minutes in lab testing against 10 self-run simulated attacks, and publish my investigations at antoniobeltranmiller.com. Bug bounty work, including an npm supply chain RCE escalated from P4 to P2 on Bugcrowd, keeps me focused on how intrusions are actually built.

TECHNICAL SKILLS

SIEM & Detection: Splunk (SPL, dashboards, alerts), Suricata (rule writing), Wireshark, Sysmon, Microsoft Sentinel (familiarity)
Security Operations: Alert triage, incident response (NIST 800-61), threat hunting, IOC analysis, MITRE ATT&CK, Cyber Kill Chain, Diamond Model of Intrusion Analysis
Systems & Cloud: Windows, Active Directory, Linux, TCP/IP, AWS security fundamentals (CloudWatch, GuardDuty, IAM, VPC)
Automation & Tools: Python, Bash, PowerShell, n8n, GPT-4 API, threat feed ingestion (AbuseIPDB, VirusTotal API), Metasploit, Burp Suite, mitmproxy

CERTIFICATIONS & EDUCATION

- CompTIA Security+ (October 2025)
- CompTIA CySA+ (In Progress, expected October 2026)

Additional training: LetsDefend SOC Analyst Path (2025), Google Cybersecurity Professional (2024), Fortinet Certified Associate and FortiGate 7.6 Operator (2025), SailPoint Identity Security Leader (2025), AWS Security Best Practices modules (2025)

B.S. Cybersecurity & Information Assurance, Western Governors University *In progress, expected late 2027*

PROJECTS

SOC Alert Investigation: Lumma Stealer via ClickFix *LetsDefend training scenario (SOC338)*

- Triageed a simulated phishing alert end to end: ClickFix social-engineering analysis, LOLBin abuse identification, and payload analysis.
- Confirmed a true positive, traced the kill chain, contained the host in the simulation, and wrote a Tier 2 escalation brief.

AI-Assisted SOC Automation Lab *Home lab | October 2025 to December 2025*

- Built an n8n pipeline that sends Splunk alerts through GPT-4 summarization and VirusTotal and AbuseIPDB enrichment into Slack.
- In lab testing against 10 self-run attacks (Metasploit, Meterpreter, Hydra), cut time to detect from 45 to 8 minutes using 10 detection rules mapped to MITRE ATT&CK.

T-Pot Honeypot Threat Intelligence *Home lab | August 2025 to Present*

- Ran T-Pot honeypots that logged 424,000+ attack attempts from 15,000+ IPs; analyzed SSH brute forcing (50,000 unique credential combinations) and SMB exploitation attempts (EternalBlue variants).
- Observed exploitation attempts for CVE-2019-12263 and CVE-2020-11900, wrote 15 Suricata rules from the traffic, and reported malicious IPs to AbuseIPDB.

npm Supply Chain MITM Vulnerability *Bugcrowd | August 2024*

- Built a mitmproxy proof of concept showing RCE through an insecure HTTP .npmrc, and argued severity from P4 to P2-High; the repository enforced HTTPS after disclosure.

WordPress Compromise Response *Independent | December 2024*

- Traced an active compromise to CVE-2021-32682, found webshells, hidden admin accounts, and .htaccess persistence, and restored operations within 2.5 hours.

EXPERIENCE

Dispatcher (Sole IT Administrator), ALM Freight *September 2021 to May 2024*

- Only IT resource for a 200-person, 2-site logistics company: Windows 10 and 42 Android devices via 42Gears MDM, manual patching, and Active Directory provisioning and group policy.
- Built a standardized least-privilege Windows image for onboarding new employees.
- Primary technical contact for 200+ drivers, resolving delivery software and device failures in real time.

Delivery Associate, MMML (Amazon DSP) *September 2025 to Present*

Delivery Associate, DBE Logistics (Amazon DSP) *May 2024 to August 2025*

Assembly Technician, Contour Windows *August 2019 to August 2021*
