SUMMARY

Security+ certified (DoD 8140 compliant) cybersecurity professional with hands-on experience analyzing 424,000+ real-world attacks via distributed T-Pot honeypot infrastructure. Built and validated an end-to-end SOC automation platform using Splunk, n8n, and GPT-4 that reduced MTTD from 45 to 8 minutes across 10 MITRE ATT&CK-mapped detection rules. Active bug bounty researcher with confirmed disclosures including a critical npm supply chain vulnerability escalated from P4 to P2 after demonstrating RCE via MITM package injection. Proven incident responder who contained an active WordPress breach within 2.5 hours restoring business operations. Pursuing Certified CyberDefender (CCD) certification and a B.S. in Cybersecurity & Information Assurance at WGU. Seeking a SOC Analyst or Detection Engineering role where offensive research experience and production-grade automation skills contribute to real threat detection operations.

EXPERIENCE

Assembly Technician

Contour Windows

August 2019 – August 2021

Dispatcher

ALM Freight

September 2021 – May 2024

- Sole IT resource for 200-person, 2-site logistics operation with no dedicated IT department.
- Managed endpoint fleet across Windows 10 workstations and 42 Android devices via 42Gears MDM.
- Executed manual patch management across the full fleet.
- Onboarded new employees using a standardized Windows ISO image with least privilege access controls — only granting application permissions required for their specific role.
- Administered Active Directory including user provisioning, account management, and group policy.
- Primary technical contact for 200+ drivers resolving real-time delivery software failures and device issues.

Delivery Associate

DBE Logistics (Amazon DSP)

May 2024 – August 2025

Delivery Associate

MMML (Amazon DSP)

September 2025 – Present

EDUCATION & CERTIFICATIONS

Bachelor of Science in Cybersecurity & Information Assurance

Western Governors University • Online • 2027

- CompTIA Security+ — October 2025 (DoD 8140 IAT Level II approved)
- Fortinet Certified Associate (FCA) — August 2025
- Fortinet FortiGate 7.6 Operator — August 2025
- Google Cybersecurity Professional — November 2024
- AWS Security Best Practices Specialization — October 2025
- Certified CyberDefender (CCD) — In Progress
- LetsDefend SOC Analyst Learning Path — February 2025

PROJECTS

AI-Powered SOC Automation Platform

Independent Research • www.AntonioBeltranMiller.com/projects/soc-automation • October 2025 – December 2025

- Built end-to-end SOC automation platform detecting and responding to 10 simulated attack scenarios.
- Engineered N8N pipeline orchestrating Splunk → GPT-4 → VirusTotal → AbuseIPDB → Slack.
- Reduced MTTD from 45 to 8 minutes via 10 production detection rules mapped to MITRE ATT&CK (T1003, T1055, T1059, T1110, T1547).
- Validated using Metasploit, Meterpreter, and Hydra in isolated lab environment.

T-Pot Honeypot Threat Intelligence Platform

Independent Research • antoniobeltranmiller.com/projects/honeypot • August 2025 – Present

- Deployed distributed T-Pot honeypot infrastructure capturing 424,000 attacks from 15,000 unique source IPs across 100 countries.
- Analyzed attack volumes including 287 million SIP/VoIP INVITE floods targeting premium-rate fraud routes, 308 million SMB exploitation attempts including EternalBlue variants, and 132 million SSH brute-force attempts yielding 50,000 unique credential combinations.

- Detected active exploitation of CVE-2019-12263 (URGENT/11 VxWorks) and CVE-2020-11900 (Citrix Workspace) against live infrastructure.
- Created 15 Suricata detection rules engineered from live threat data across active honeypot sensors.
- Submitted high-confidence IOCs to AbuseIPDB and notified hosting providers of malicious infrastructure.

WordPress Breach Containment & Incident Response

Independent Consulting • www.antoniobeltranmiller.com/blog/incident-response • December 2024 - December 2024

- Led end-to-end incident response for active WordPress compromise.
- Identified entry via CVE-2021-32682, discovered webshell backdoors, hidden admin accounts, and .htaccess persistence mechanisms.
- Contained breach, eradicated all persistence, and restored operations within 2.5 hours preventing \$500K+ in potential losses.
- Mapped full attack chain to MITRE ATT&CK framework.

NPM Supply Chain MITM Vulnerability Discovery

Bugcrowd • <https://www.antoniobeltranmiller.com/projects/vulnerability-research> • August 2024 - August 2024

- Identified insecure HTTP .npmrc configuration in public repository enabling MITM attack chain.
- Developed proof-of-concept using mitmproxy to intercept npm traffic and inject malicious package tarballs with post-install RCE payloads.
- Successfully argued severity escalation from P4 to P2-High after demonstrating full exploitation chain.
- Coordinated responsible disclosure through Bugcrowd including documented remediation recommendations that resulted in HTTPS enforcement across the affected repository.

SKILLS

SIEM & Monitoring:

- Splunk (SPL, Dashboards, Alerts)
- Microsoft Sentinel
- ELK Stack (Elasticsearch, Logstash, Kibana)
- Suricata IDS (signature writing)
- Wireshark

Endpoint & Infrastructure:

- Windows 10 Administration
- Active Directory (provisioning, GPO, least privilege)
- Linux (Ubuntu Server)
- Sysmon (SwiftOnSecurity configuration)
- 42Gears MDM
- Docker
- VMware/VirtualBox
- AWS (GuardDuty, CloudWatch, IAM, VPC)

Security Operations:

- Incident Response (NIST 800-61)
- Threat Hunting
- MITRE ATT&CK Framework
- Vulnerability Management
- Malware Analysis (static & dynamic)
- IOC Extraction & Analysis
- Threat Intelligence (AbuseIPDB, VirusTotal)

Offensive & Research:

- Burp Suite
- Metasploit
- mitmproxy
- Nessus
- Bug Bounty (Bugcrowd, HackerOne)
- Responsible Disclosure

Automation & Scripting:

- Python
 - Bash
 - PowerShell
 - n8n Workflow Automation
 - GPT-4 API Integration
-
