SUMMARY

Security+ certified cybersecurity professional pursuing a SOC Analyst I role, with about two and a half years of solo IT administration and CompTIA CySA+ in progress. I triage alerts in my home lab and on LetsDefend using Splunk, Sysmon, and Suricata IDS, map activity to MITRE ATT&CK, and tune detections to cut false positives. I built an AI and MCP-driven Splunk detection pipeline and ran a T-Pot honeypot for live threat data, documented at antoniobeltranmiller.com. Available for rotating and off-hours shifts.

TECHNICAL SKILLS

SIEM & Detection: Splunk (SPL, dashboards, alerts), Suricata IDS (alert triage), Sysmon, Wireshark
Security Operations: Alert monitoring & triage, incident response (NIST 800-61), IOC analysis, MITRE ATT&CK, Cyber Kill Chain
Endpoint & Network: Windows, Active Directory, Linux, endpoint telemetry (Sysmon), TCP/IP, firewall administration (FortiGate), IDS/IPS
Cloud & Automation: AWS fundamentals (CloudWatch, GuardDuty, IAM, VPC); Python, Bash, PowerShell, n8n, LLM/MCP integration, AbuseIPDB & VirusTotal enrichment

CERTIFICATIONS & EDUCATION

CompTIA Security+ (October 2025) | CompTIA CySA+ (In Progress, expected October 2026)
Fortinet Certified Associate and FortiGate 7.6 Operator (2025) networking and firewall foundation
Additional training: LetsDefend SOC Analyst Path (2025), Google Cybersecurity Professional (2024), SailPoint Identity Security Leader (2025), AWS Security Best Practices modules (2025)
B.S. Cybersecurity & Information Assurance, Western Governors University | In progress, expected late 2027

PROJECTS

SOC Alert Investigation: Lumma Stealer via ClickFix *LetsDefend Challenge (unguided SOC alert, SOC338)*

- Worked an unguided phishing alert end to end the way a live Tier 1 queue would hand it over: email triage, ClickFix social-engineering analysis, LOLBin (mshta.exe) abuse identification, and payload analysis on VirusTotal.
- Confirmed a true positive, traced the full kill chain, contained the host, and wrote a Tier 2 escalation brief another analyst could pick up without a single question.

AI-Assisted SOC Automation Lab *Home lab | Oct 2025 to Dec 2025*

- Built a five-VM SOC pipeline (Windows 10, Splunk, n8n, DFIR IRIS, Kali): Sysmon on Windows 10 into Splunk, with n8n handing each alert to an LLM (GPT-4.1 mini) tier-1 assistant that summarizes, enriches via AbuseIPDB and VirusTotal, maps to MITRE ATT&CK, and posts to Slack, opening a DFIR IRIS ticket on confirmed alerts.
- Added an MCP server so the AI can query Splunk directly in natural language, and wrote and tuned the detections myself, including reworking an SSH brute-force rule that was firing on a single failed login; validated each rule by attacking the Windows VM from Kali (Hydra, Metasploit, Atomic Red Team).

T-Pot Honeypot Threat Intelligence *Home lab | Aug 2025 to Oct 2025*

- Ran a single-host T-Pot honeypot on a public DigitalOcean VPS that logged 424,000+ events across its sensors; triaged Suricata exploit-attempt signatures (CVE-2019-12263, CVE-2020-11900) and reported malicious source IPs to AbuseIPDB.

npm Supply Chain MITM Vulnerability *Bugcrowd | Aug 2024*

- Built a mitmproxy proof of concept showing RCE through an insecure HTTP .npmrc and argued severity from P4 to P2 on Bugcrowd, backed by my own CVSS 3.1 score of 8.3 (High); the repository enforced HTTPS after disclosure.

WordPress Compromise Response *Independent | Dec 2024*

- Traced an active compromise to CVE-2021-32682, removed webshells, hidden admin accounts, and .htaccess persistence, and restored operations within 2.5 hours with no PII exposed.

EXPERIENCE

Dispatcher / Sole IT Administrator, ALM Freight *September 2021 to May 2024*

- Only IT resource for a 200-person, 2-site logistics company: administered Active Directory (provisioning, group policy), managed Windows 10 and 42 Android devices via 42Gears MDM with manual patching, and onboarded staff from a standardized least-privilege Windows image.
- Primary technical contact for 200+ drivers, resolving delivery software and device failures in real time.

Delivery Associate, MMML (Amazon DSP) *September 2025 to October 2026*

- Built the SOC automation lab and ran a T-Pot honeypot outside working hours while studying for CySA+.

Delivery Associate, DBE Logistics (Amazon DSP) *May 2024 to August 2025*

Assembly Technician, Contour Windows *August 2019 to August 2021*
